

DESCRIPTION

The RH111 is a general purpose voltage comparator. The RH111 offers maximum input offset voltage of 3mV and input offset current of 10nA with a typical response time of 200ns. The RH111 can operate from a single 5V supply to $\pm 15\text{V}$ supplies and can drive up to 50mA loads referred to ground or either supply. A separate output Ground pin allows output signals to be isolated from analog ground.

The wafer lots are processed to the requirements of MIL-STD-883 Class S to yield circuits usable in precision space applications.

Note 1: Applicable for $\pm 15\text{V}$ supplies. The positive input voltage limit is 30V above the negative supply. The negative input voltage limit is the negative supply.

Note 2: $T_{J\text{MAX}} = 150^\circ\text{C}$

Note 3: Offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V up to $\pm 15\text{V}$ supplies.

Note 4: Offset voltage and offset currents shown are the maximum values required to drive the output within a volt of either supply with a 1mA load. These parameters define an error band and take into account the worst-case effects of voltage gain and input impedance.

Note 5: Response time is specified for a 100mV input step with 5mV overdrive with the collector output terminated with a 500 Ω pull-up resistor tied to 5V.

Note 6: Do not short the Strobe pin to ground. It should be current driven at 3mA to 5mA for the shortest strobe time. Currents as low as 500 μA will strobe the RH111 if speed is not important. External leakage on the Strobe pin in excess of 0.2 μA when the strobe is "off" can cause offset voltage shifts.

Note 7: $R_L = 1\text{k}$, $-10\text{V} \leq V_{\text{OUT}} \leq 14.5\text{V}$

Note 8: $V_S = \pm 15\text{V}$, unless otherwise noted.

Note 9: $V_S = \pm 15\text{V}$, $V_{\text{CM}} = 0\text{V}$, $T_A = 25^\circ\text{C}$, unless otherwise noted.

TABLE 2: ELECTRICAL TEST REQUIREMENTS

MIL-STD-883 TEST REQUIREMENTS	SUBGROUP
Final Electrical Test Requirements (Method 5004)	1*,2,3,4
Group A Test Requirements (Method 5005)	1,2,3,4
Group C and D End Point Electrical Parameters (Method 5005)	1

* PDA Applies to subgroup 1. See PDA Test Notes.

PDA Test Notes

The PDA is specified as 5% based on failures from group A, subgroup 1, tests after cooldown as the final electrical test in accordance with method 5004 of MIL-STD-883 Class B. The verified failures of group A, subgroup 1, after burn-in divided by the total number of devices submitted for burn-in in that lot shall be used to determine the percent for the lot.

Linear Technology Corporation reserves the right to test to tighter limits than those given.
